Subject: Smitty's Toppenish
Date: Friday, October 04, 2013 5:23:38 PM

Rob:

Thank you for your call regarding Smitty's Toppenish. I looked at the previous reports that YenVy did for the site and I will work on getting a similar one to you ASAP. You mentioned in our conversation that she included charts of concentration versus time. I looked and found that she had included some in her October 2012 report but not in her January 2013 report. This led me to wondering if you got that report dated January 9, 2013. Let me know if you did or did not receive that report.

I will be looking at the site with a "fresh set of eyes" and will try to make sense of what is going on out there. I am not ready to say that the remedial actions are or are not working. It seems that in the July 30, 2013 sample results, the concentrations decreased some. It may be that the plume is stable and the concentrations are bouncing around within it. I will be looking into this and discussing with my supervisor and Sue Smith what we should do. It is also my understanding that the insurance company has denied the Smith's claim for coverage on this site so that limits us greatly on the amount of money we can throw at it. I apologize for not getting something to you sooner or letting you know before we sampled in July.

If you want to discuss this site some more do not hesitate to call me.

Thanks
